horticulture

APPLICATION

- ◆ Substrate cultivation
- ◆ Other greenhouse cultivation
- ◆ Business premises
- ◆ and many more

AIR-OP CLIMATE TUBE

optimal airflow based
on your calculation

creates the desired
climate

strong material for
long-term use

Creating an optimal climate in the greenhouse is what growers are working on, day in and day out. A good climate ensures optimal growth and production in the greenhouse. Our AIR-OP climate tube can help with this.

By applying the AIR-OP climate tube in a greenhouse, a homogeneous climate can be created based on your wishes and needs. Due to the many possibilities in perforating, unwinding and printing, we give you the opportunity to make an optimal calculation of the desired air flows.

AIR-OP CLIMATE TUBE

TECHNICAL SPECIFICATIONS

Material	low Density Polyethylene (LDPE) film
Color	white and transparent
Version	perforated tube on the roll
UV-resistance	standard 320Kly, other UV-resistance on request
Fire resistance	optional
Width	custom made tube width
Thickness	150 mu and 180 mu, other thickness on request
Length	custom made length
Perforation	custom made
Certificates	BRCGS, ISO14001, ISO26000

Oerlemans Plastics is the producer in the field of plastic plastics. With 34 mono and co-extruders we produce film in the qualities LDPE, MDPE, LLDPE and HDPE. We are constantly developing new film and plastics concepts for horticulture, food, non-food and plastics wholesale. These products are consumed in more than 30 countries. The customer, quality and profitable end result are at the heart of every solution. Our in-house logistics enable us to offer optimum service.

Oerlemans Plastics is a subsidiary of Oerlemans Packaging. Together with the other companies we can offer you a suitable solution!

ADVICE

Are you searching for a specific solution with which you can cultivate a good yield and that has an excellent level of processability? Oerlemans Plastics is the specialist in the production of agricultural and horticultural film. Feel free to contact us!
