APPLICATION

- ◆ Cucumbers
- ◆ Broccoli

BI-OPL CUCUMBER SHRINK FILM

the product has a
longer shelf life

it protects the product

100% home-
compostable

Cucumber shrink film is immensely useful, not only for the cucumber's shelf life but also in view of hygiene on the shelves. A non-packed cucumber rapidly loses 3.5% of its weight in the first three days after harvesting. A packed cucumber slows down this aging process: it loses only 1.5% of its weight in two weeks!

Oerlemans Plastics specializes in making high-quality cucumber shrink film. We work according to a fixed formula. The BI-OPL film can be thrown into the green container together with the cucumber residues and it degrades 100% based on the HOME OK compost certificate.
