horticulture

APPLICATION

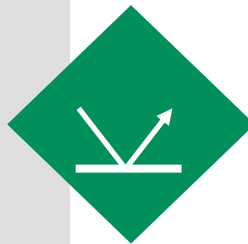

- ◆ Substrate cultivation
- ◆ Other greenhouse cultivation
- ◆ And many more

GROUND COVER FILM BLACK/WHITE

By using our reflection foil, you will start the new growing year with a clean and hygienic start. Herein, a distinction is made between strip and walking foil. Strip films are laid on top of the existing ground cloth or walking foil. Our strip foils are also ideally suited for collecting excess leaves, so they can be easily removed at crop change. Wide walking foil is mainly used in glass or tunnel greenhouses. The white side ensures optimal growth of your crop due to its excellent reflection. The black side ensures no weed growth on your substrate.

We will gladly give you advice which foil is suitable for your crop.

high reflection for
optimum growth

ensures a high level of
hygiene
