APPLICATION

- ◆ Tomato
- ◆ Cucumber
- ◆ Pepper
- ◆ Eggplant

GUTTER PROTECTION FILM

OPS gutter protection film has been designed to protect your crop gutters. It usually takes a lot of energy, water and chemicals to clean gutters during the crop rotation. This can be greatly reduced by using gutter protection film, which will also extend the life span of your gutters. The black/white film keeps your gutters clean, as there is virtually no algae growth. In addition to protecting the gutter, it can also reduce and prevent unwanted root development, diseases and viruses. A specially designed rewinding frame helps you pull the film quickly and easily across the gutter.
