horticulture

APPLICATION

- ◆ Substrate Cultivation
- ◆ Flower Cultivation
- ◆ Other Greenhouse Cultivations

OPAC86^E ANTI-CONDENSATION FILM

creates a homogeneous
climate in the greenhouse

save on energy costs

high light transmission

In the past, OPAC86E anti-condensation film was only used in order to keep the energy costs as low as possible. After all, it only took one or two weeks of cold weather to recover the costs of anti-condensation film. Nowadays, anti-condensation film is also used to create a climate which is as ideal and homogeneous as possible for starting up a new crop. This means the film not only cuts costs, but can also yield an even better crop result by creating the right climate in the greenhouse.

To achieve an even better climate, we have developed VARI-OP anti-condensation film. A maximum of 20 different sections can be perforated in a roll of film. In combination with the correct climate settings this helps you create the perfect climate.

OPAC86^E ANTI-CONDENSATION FILM

TECHNICAL SPECIFICATIONS

Material	Low Density Polyethylene (LDPE) film with EVA and Anti-drip addition
Colour	Transparant
Version	Flat on the roll, folded is optional
Width	Standard flat widths are 175, 200, 250, 330, 350, 425, 480, 530, 580 and 680 cm, other widths on request
Thickness	Standard thickness 50 mu, other thickness on request
Length	Custom made, standard lengths available
Perforation	Custom made perforation with 6 mm holes
Flame retardant	Flame retardant according to the NTA8825 / K4 standard
Light transmission	91 %
Certificates	BRCGS, ISO14001, ISO26000

Oerlemans Plastics is the producer in the field of plastic plastics. With 34 mono and co-extruders we produce film in the qualities LDPE, MDPE, LLDPE and HDPE. We are constantly developing new film and plastics concepts for horticulture, food, non-food and plastics wholesale. These products are consumed in more than 30 countries. The customer, quality and profitable end result are at the heart of every solution. Our in-house logistics enable us to offer optimum service.

Oerlemans Plastics is a subsidiary of Oerlemans Packaging. Together with the other companies we can offer you a suitable solution!

ADVIES

Are you searching for a specific solution with which you can cultivate a good yield and that has an excellent level of processability? Oerlemans Plastics is the specialist in the production of agricultural and horticultural film. Feel free to contact us!
