- ◆ And much more

OPL LIGHTWEIGHT STEAM FILM

lightweight in use

ensures optimal
disinfection of the soil

resistant to high
temperatures

Steam film is suitable for removing bacteria and viruses from the soil after crop rotation. This can be disinfected by steaming the soil. By covering the ground with the special OPL lightweight steam film, the steam can then do its work under the film.

The heat released from the steam automatically disinfects the soil. For this we have developed a special steam film which is resistant to high temperatures. The steam film is lightweight, making it easier to use. A repair piece of 1 m² has been added for possible damage.

OPL STEAM FILM

TECHNICAL SPECIFICATIONS

Material	Low Density Polyethylene (LDPE) film + heat resistant additive
Color	Black
Version	Small width flat and wide width folded on a roll
Width	185, 240, 380, 480, 570, 720, 950, 1.090 cm, other widths on request
Thickness	150 mu standard, 185 mu on request
Length	Custom made
Use	Approx. 150-200 steam hours by correct use
Resistance	Maximum boiler temperature of 130 degrees and a pressure of 2 Bar
Certificates	BRCGS, ISO14001, ISO26000

Oerlemans Plastics is the producer in the field of plastic plastics. With 34 mono and co-extruders we produce film in the qualities LDPE, MDPE, LLDPE and HDPE. We are constantly developing new film and plastics concepts for horticulture, food, non-food and plastics wholesale. These products are consumed in more than 30 countries. The customer, quality and profitable end result are at the heart of every solution. Our in-house logistics enable us to offer optimum service.

Oerlemans Plastics is a subsidiary of Oerlemans Packaging. Together with the other companies we can offer you a suitable solution!

ADVICE

Are you searching for a specific solution with which you can cultivate a good yield and that has an excellent level of process ability? Oerlemans Plastics is the specialist in the production of agricultural and horticultural film. Feel free to contact us!
